Three Letter Abbreviations – Station Codes

The table below shows all the different systems/business units which use a TLA to identify a station. It maps each station to each TLA in each system.
This list was first compiled in 2012 and it reveals that there are several duplications and alternates due to a legacy of business units acting independently.
As the codes are used in a wide range of information systems, many of which are externally owned, it is not practical to change them.

In the event of a new station being commissioned which requires a new code please contact the LU Head of Engineering Information
The rules for assigning a new TLA are described in the LU Location Coding System Standard S1035

Key:
Green = **Unique**. Everyone uses this code for this station and the code is unique, i.e. not used elsewhere for another station.
Amber = **Alternates Exist**. More than one code exists for this station, but this code is still unique.
Red = **Duplicates Exist**. This code is used for more than one station.
